SUMMARY

Recent CSE (AI/ML) graduate from Vellore Institute of Technology with shipped production software - an accounting system live with a real client and a health app in Google Play closed testing. Strong across Python, JavaScript, TypeScript, React, Node.js, and FastAPI. Focused on offline-first architecture, data integrity, and test-backed systems.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, C++
ML / AI: PyTorch, scikit-learn, NumPy, Pandas
Web / Backend: Node.js, Express.js, React, React Native, FastAPI, REST APIs
Databases: SQLite, MongoDB, MySQL
Tools: Git, GitHub, VS Code, Jest, Expo

PROJECTS

PulseSense - Offline Mobile Health Companion

Repo

React Native, Expo SDK 54, TypeScript, SQLite, Zustand, Jest

May 2026 - Jun 2026

- Built and shipped PulseSense to Google Play (closed testing, production-eligible Jun 2026) - an offline-first mobile health companion with 22 screens, 13-table SQLite database with FK constraints and versioned migrations, and 15,500+ lines of TypeScript across 142 files.
- Implemented a deterministic rule-based triage engine in pure TypeScript evaluating 18 symptom flags against 10 clinical rules with hard-override priority sorting, alongside a drug interaction checker covering 69 known pairs across 8+ drug categories.
- Engineered a platform adapter pattern (IHealthAdapter interface) for unified Apple Health and Health Connect sync, and a three-tier export pipeline generating 5 report types in both PDF and CSV entirely on-device.
- Authored 43 test files (2,700+ lines) using Jest and React Native Testing Library, resolved N+1 query issues in medication fetching, and wrapped critical SQLite mutations in transactions for atomicity.

Hisaab-Pro - Offline Accounting & Payroll System

Product Page | Repo

Node.js, Express.js, SQLite, JavaScript, Jest

Jan 2026 - Apr 2026

- Created and launched an offline-first double-entry accounting system featuring 9 core business modules, automating ledger transactions, GST-ready invoicing, and generating 6 comprehensive financial reports (Balance Sheets, P&L, aging schedules).
- Secured sensitive business data using AES-256 encrypted SQLite databases, implementing Write-Ahead Logging (WAL) to improve data integrity and reduce risk of corruption during application crashes or unsafe USB drive removals.
- Developed an automated payroll module linking daily staff attendance to ledger accounts, supported by a backend suite of 350+ Jest tests across 18 files to validate logic and prevent duplicate processing.
- Iterated across 2+ product versions (client deployment and internal build), adding payroll automation, attendance-linked salary processing, and client-side PDF exports.

Skillence - ML-Powered Career Platform

Live Demo | Repo

React 19, FastAPI, PyTorch, NumPy, Gemini API, Azure AI

Jul 2025 - Mar 2026

- Architected a full-stack career platform, developing a 3-stage recommendation pipeline that evaluates a 692-skill vocabulary to map user profiles against 894 occupations with low-latency (~1 ms) inference.
- Trained predictive machine learning models in PyTorch and designed a custom pure NumPy inference layer, reducing backend deployment crashes to near-zero while maintaining inference accuracy.
- Engineered an automated campus placement engine that parses academic grade histories and applies a 4-variable algorithmic scoring model, accelerating student shortlisting with zero LLM dependency.
- Built a job market analytics dashboard processing 30,000+ job postings, equipping users with ML-based salary predictors and an interactive offer evaluator benchmarking data across 25+ countries.

EDUCATION

Vellore Institute of Technology – B.Tech CSE, Specialization in AI/ML
Bhopal, Madhya Pradesh, India

Oct 2022 - Jul 2026
CGPA: 8.67 / 10.0

CERTIFICATIONS

Blockchain Developer - IBM

Adobe UI & UX (Graphic Design) - Ethnus/Codemithra

HTML,CSS,and Javascript for Web Developers - Johns Hopkins University (Coursera)
